1. Introduction

This specification provides the definition of the Financial statement of an account message (FINSTA) to be used in Electronic Data Interchange (EDI) between trading partners involved in administration, commerce and transport.

1.1. Scope

1.1.1. Functional Definition

This message can be used to cater for various communication functions between financial institutions and their customers. The most frequent function is to provide a statement of booked items confirming entries on a customer's account. The message type may contain several accounts (quoted in the B-level).

1.1.2. Field of Application

The Financial statement of an account message may be used for both national and international trade. It is based on universal commercial practice and is not dependent on the type of business or industry.

1.1.3. Principles

Several accounts, value dates, entry dates and currencies may be specified.

1.3. Data Segment Clarification

This section should be read in conjunction with the Branching Diagram and the Segment Table which indicate mandatory, conditional and repeating requirements.

The following semantic principles apply to the message and are intended to facilitate the understanding and implementation of the message: The Financial Statement of an Account message is structured in three levels: A,B and C. Level A starts with the UNH segment, level B starts with the LIN segment in Segment Group 4 and level C starts with the SEQ segment in Segment Group 6.

- Level A contains general data related to the whole message and is contained in Segment Groups 1, 2, 3 and 7.
- Level B contains the account related details such as balances, account number. Furthermore, this level describes the kind of statement.
- Level C contains the single item as it was advised to the customer by a debit/credit advice. Furthermore, this level contains any level B of a multiple message such as PAYMUL, DEBMUL or CREMUL. In some special cases it is possible, that several B levels are contained in a message without any dependent C levels (balance confirmation for auditing purposes).

Where a choice of code or text is given only the code element should be used wherever possible.

1.4. Codes to be used in DE 1131 and DE 3055 (associated with DE 3434 – Institution Branch Number)

DE3434 – DE1131 (Code List Qualifier)	25 = Bank identification
	43 = CHIPS Participant ID
	44 = CHIPS Universal ID
	154 = Bank branch sorting identification
	155 = Automated clearing house
	157 = Clearing code
DE3434 – DE3055 (Code List Responsible Agency, coded)	5 = ISO (International Organization for Standardization)
	19 = FRRC (Federal Reserve Routing Code)
	108 = FR, Banque de France
	114 = US, ABA (American Bankers Association)
	118 = SE, Svenska Bankfoereningen
	119 = IT, Associazione Bancaria Italiana
	121 = CH, Telekurs AG

3. Segment Layout

3.1. Introduction

This section describes each segment of the UN/EDIFACT message FINSTA.

Each segment is presented in a separate table and in the sequence in which they appear in the message.

The upper half of each table provides information about the segment or segment group concerned, the lower part of the table describes the data elements (composite and simple).

Each table is structured in three vertical blocks: UN/EDIFACT Directory 96.A, D6 and CRG:

3.1.1. UN/EDIFACT Directory 96.A Block

The left third of the table provides information extracted from the original UN/EDIFACT Directory 96.A.

In the first line of this block, the segment or segment group tag is followed by the maximum number of occurrences.

The second line contains the (M)andatory / (C)onditional indicator at segment level, according to the UN/EDIFACT Directory 96.A

In the lower half of the table, the data element tag (composite or simple) and full name are followed by the corresponding (M)andatory / (C)onditional indicators and the format.

3.1.2. D6 Description Block

This block presents the recommendations of D6 (EWG sub-working group Finance).

Both for segment level and for data element level (simple and composite), the following status/sub-status are defined:

M	MANDATORY	The entity is mandatory and must be sent (according to directory, unchanged)
R	REQUIRED	The entity is required and must be sent
D	DEPENDENT	The entity must be sent in certain conditions, as defined by the relevant explanatory note

O	OPTIONAL	The entity is optional and may be sent at the discretion of the user
N	NOT USED	The entity is not used and should be omitted. Any data placed in an element marked with N will be ignored.

At data element level:

- The first column indicates the status as defined above (with the options M, R, D, O, N);
- The second column includes information affecting the code values as follows:

*	Restricted codelist	Code values preceded by an asterisk (*) are the only codes available for use in the given context
<blank>	Open codelist	Code values not preceded by an asterisk (*) are not restricted (they are open). The available codes are listed in the codelist of the corresponding UN/EDIFACT directory.
* R	Required code in a restricted list	Codes preceded by an "R" are required and must occur in one repetition of the corresponding segment if used.
R	Required code in an open list	Codes preceded by an "R" are required and must occur in one repetition of the corresponding segment if used.

- The third column provides additional comments and descriptions.

Note that if a segment group/segment/composite data element is flagged as "N", all data elements within that segment group/segment/composite data element will have blank status indicators.

3.1.3. CRG Description Block

The last block of the table describes the preferred use of the message for a group of multinational companies constituting the "Corporate Reference Group" (CRG). The CRG is established as a forum for discussions of standardisation issues. The members of the group are predominantly companies with activities in several countries and a large resource base.
